

## 1 day Workshop on “State-level safeguards approaches”

### Workshop Content

In implementing safeguards, the International Atomic Energy Agency (IAEA) considers a State’s nuclear and nuclear-related activities and capabilities as a whole, within the scope of the State’s safeguards agreement. For each State, a customized State-level safeguards approach is developed on the basis of a structured, technical method and by systematically taking into account the State specific factors.

The workshop presents an overview on the general processes to develop and implement State-level safeguards approaches, starting with the collection and evaluation of information, and to plan, conduct safeguards activities. Case studies using fictitious model states will illustrate the implementation of safeguards in States with different State specific factors.

### Requested Background

The workshop is open to professionals with an interest in nuclear safeguards and non-proliferation. Basic knowledge of the nuclear fuel cycle and nuclear safeguards is recommended but not mandatory.

### Teacher

Irmgard Niemeyer, Head of Nuclear Safeguards and Security in the Institute for Nuclear Waste Management and Reactor Safety at Forschungszentrum Jülich, Germany

### Method of Delivery

Overview presentations, facilitated discussions, case studies

### Approximate date

May 2019
